### EXECUTIVE BIOGRAPHY

# Bridging two decades of global operations and frontier AI research.

**Dr. Tong Yin** is a management scholar, strategic analyst, and quantitative systems developer who serves as Founder & CEO of InsightBridge Global LLC and its sister research entity, InsightBridge Global Lab LLC. His work bridges more than twenty-five years of international executive experience with advanced research in artificial intelligence, revenue optimization, and organizational governance.

### Career prior to InsightBridge

Before founding InsightBridge, Dr. Yin served as an Instructor at Auburn University while completing his Ph.D. in Hospitality Management. Over the preceding two decades he held senior executive positions with international firms across hospitality, professional services, and global manufacturing in the United States, China, Australia, and Europe — leading operations, commercial strategy, and cross-border expansion for organizations at scale.

### Present ventures

InsightBridge Global LLC is an AI-driven revenue optimization and strategic advisory firm serving the global hospitality and financial sectors. The firm engineers autonomous dynamic-pricing systems that reduce hotels' dependency on OTAs, advises mid-sized sovereign entities and regional governments on tourism master plans across the Middle East, Southeast Asia, and Europe, and deploys machine-learning trading systems on institutional platforms including Interactive Brokers and Dukascopy. The company also publishes InsightBridge Global Intelligence, a bilingual data-backed briefing distributed across the hospitality sector.

InsightBridge Global Lab LLC, established in 2026 and based in Auburn, Alabama, is an independent research-only entity prototyping long-horizon AI and AI-driven robotics for hotel operations, guest services, and international tourism infrastructure over the coming decade.

### Research and theoretical frameworks

Dr. Yin's scholarly work centers on organizational resilience, AI strategy, geopolitical risk, and civilizational governance. He is the originator of several theoretical frameworks widely referenced in his field: The Home Model, a covenant-based governance framework grounded in human-centric traits AI cannot replicate; Management Debt, a framework for diagnosing structural organizational decline; and Dynamic Driver Replacement Theory together with Core Code Theory, strategic frameworks for modeling organizational lifespan and stability. He is a regular editorial contributor to Hospitality Net, Hotel News Resource, and Phocuswire.
